

# Blister Rust Potential Based on Western White Pine Habitat.

## Blister Rust Potential

### Disclaimer:

This map has been compiled using the best information available to the Idaho Department of Lands at the time and may be updated and or revised without notice. In situations where known accuracy and completeness is required, the user has the responsibility to verify the accuracy of the map and the underlying data sources.

This layer was obtained from the US Forest Service in the form of a potential vegetation layer and a data table breaking down likelihood of Western White Pine. The table was joined to the layer and reclassified into three classes. Good likelihood was assigned a 3 and excellent was assigned a 5, poor and fair were assigned 0 on the recommendation from Carol Randall and Tom Eckberg. The objective of the layer is to identify probable areas of concern for Blister Rust.
