Please to protect private property, health, safety, and environment.

1. Oil and gas records should be made public immediately
2. Metering and reporting of oil and gas should be done at the wellhead to protect taxpayers and mineral interest owners.
3. The current setback from occupied structures is inadequate to protect people living with oil and gas.
4. Surface use agreements should protect any lost income or lost property value and should not be restricted to lost agricultural income and lost value of improvements. The surface use bond should be increased to a minimum of \$10,000 per well.
5. Ensure bonding amounts, particularly blanket bonds, are adequate to prevent a legacy of abandoned wells currently seen in other oil and gas producing states.

Thank you.

Ken Chambers
