Comment:

I would like to oppose the application of John Condron to get commercial access in Wolf Lodge Bay. The applicant has not provided any proposals for mitigating the effects of North Idaho Maritime operations on raptor populations, in particular Bald Eagles, which depend on the site and kokanee salmon populations during winter. In addition to potential kokanee population declines associated with spawning bed habitat loss caused by commercial operations in the bay other factors such as increased traffic and noise pollution have the potential to negatively affect raptor populations. Because birds communicate primarily by sound, loud environments interfere with their communications and reduce pairing by almost 15 percent. The site's winter mud flat is also used quite extensively by eagles during the time period between Thanksgiving and New Year's for feeding and loafing. Please do not approve the application/permit to allow commercial development in Wolf Lodge Bay
Audra Holm, DC
