**Comment:**

As a long time North Idaho local resident and business owner I have known and worked with John Condon and His Companies. I have always found him to be responsible not only to his clients but to the community at large. In specific to working around the waterways he has been very responsible in his approach to wildlife and habitat including being one of the few companies actually restoring habitat on the waterways especially along miles of the bank of the Coeur d' Alene and St Joe Rivers. His companies are also always first responders called when accidents and tragedies occur in and along the waterways. Both government and private entities alike have looked to his companies for Train derailments, boat and airplane accidents, oil and gas spills, soil erosion along with construction of docks, piers, boat ramps, retaining walls, sea walls, pilings and many other Waterway service needs and maintenance of the same. Having boated almost all my life on Coeur d' alene lake I also believe this location to be a perfect location for his operation to stage and serve all of the above needs of the government and general public. If not this location where better to serve the needs of our community? Pleas consider the approval of Mr Condon's application.

Respectfully,

Clifford E. Mort
