Comment:

Our neighborhood...our community here on the East Side of the lake, are all living here because of 2 very important reasons: the beauty of nature and the safety of our families. The development of any commercial of any kind would be hazardous to both the public and the environment. The trucks, for example, entering and exiting would not only cause automobile hazards, but also the inability for emergency vehicles to come and go quickly, due to traffic blocks from turn around issues. As for the environment & ecological issues – it would be a devastation of catastrophic proportions. Everything from the fish and eagle population, to the disruption of the silt and added water pollution. This is our chance to preserve God's beautiful gift to all of us and keep our path free of congestion while safely protecting our families and the beautiful community we live in and thousands of others visit.
