

Shade Monitoring Season Fact Sheet

Project Goal: Measure pre- and post- harvest shade on 70 sites, including 50 test sites

2017 Activities: Two field crews monitored 35 pre-harvest and 30 post-harvest sites, then digitized more than 4000 solar pathfinder images

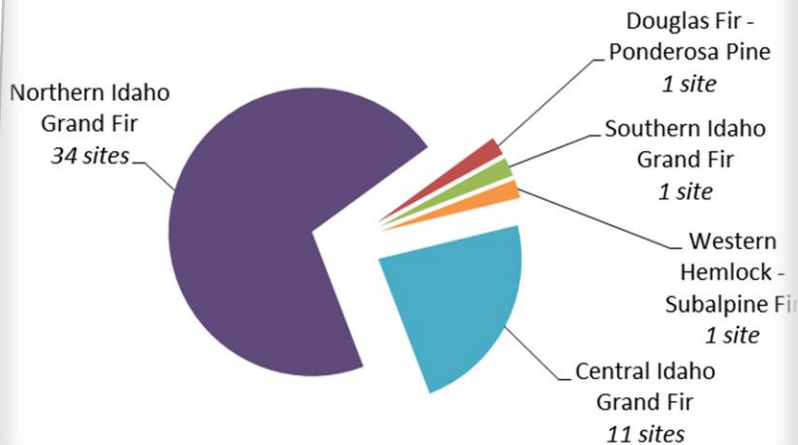

Progress: Year 2 of a 3 year study. 48 test and 21 control sites monitored

Difficulties: Delayed harvests. Steep sites (although none rejected). Cancelled sales

Follow-up: We need 2 more test sites. 2018 field crew will have 47 sites to monitor

Forest Types Mostly NIGF and CIGF

Sites Mostly State-Owned
