REGARDING: IDL ITB 24-204-121002 – SLOANS POINT-BIG CREEK NCT - ADDENDUM 1

This ADDENDUM 1 is sent with an answer to a question received for the original solicitation released on January 17, 2024.

1. What are the average stems per acre?

ANSWER: Here are some photos to depict the stand conditions in portions of the Sloan's contract area. There are a few lodgepole dominant stands in the Sloan's project area where understory TPA amounts exceed an average of 400 TPA. Most of the overall project area has an estimate understory TPA amount of 200-250 on average, this includes both the Big Creek project area in addition to the Sloan's units that are not lodgepole dominant. Please let me know if this is enough info for the potential bidders to make a legitimate estimate for the NCT work. Thanks all, please don't hesitate to reach out for more info.

Please see attached photos.

All other terms and conditions remain the same.

This question and answer does not change the due date of the ITB. **Submit your bid before: February 20, 2024 @ 3:00 p.m., PT (Pacific Time).**
