SPARK ARRESTER GUIDE— Multiposition Small Engine (MSE) Volume 2

WE WANT YOUR FEEDBACK....

ON THE DISTRIBUTION OF THE NEXT PUBLICATION OF THE SPARK ARRESTER GUIDE, Volume 2

We are moving towards distributing less paper, and will be distributing future versions electronically on a cd. Let us know what your needs are:

_____ *I want to continue receiving Volume 2 printed.*

_____ *I would just like a cd with Volume 2 as a pdf file.*

_____ *I would like the cd as well as the printed version.*

Your Name _____

Agency _____

Address _____

Telephone _____

E-mail Address _____

PLEASE FOLD, STAPLE, STAMP AND MAIL or E-MAIL FEEDBACK TO ruthpaz@fs.fed.us

FOREWORD

In 1986 the National Wildfire Coordinating Group (NWCG) authorized the Fire Equipment Working Team (FEWT) to establish a subcommittee to improve and update the Spark Arrester Guide (SAG). The subcommittee reduced the size of the previous SAG and redesigned it to improve its effectiveness and expand its applicability to more wildland fire agencies and geographic regions. The SAG is published for the guidance of cooperating Federal, State, and local agencies and is now a publication of the U.S. Forest Service. Federal and State laws and administrative requirements prescribe when and where spark arresters are required.

Appropriate Standards referenced in this Guide establish the minimum performance and maintenance requirements of spark arresters for internal combustion engines to be operated on or near grass, timber, brush, or other wildland fuels. During periods of very high or extreme fire danger, spark arresters meeting these Standards will not give complete protection against exhaust spark fires. Additional measures, including shutdown of operations, may be required during such periods.

The U.S. Department of Agriculture (USDA) maintains a general purpose spark arrester test facility and performs multiposition small engine spark arrester qualification evaluations at the USDA Forest Service's, San Dimas Technology and Development Center, 444 East Bonita Avenue, San Dimas, CA 91773, 909-599-1267. Qualified spark arrester lists are maintained and published through the Center. The camera-ready copy for the Spark Arrester Guide was produced at the SDTDC for the NWCG by the following personnel:

Ralph Gonzales—Fire Program Leader
Ruth Paz—Mechanical Engineer
Rebecca Gregory—Project Assistant
Janie Ybarra—Visual Information Specialist

GENERAL INSTRUCTIONS FOR USE OF THE SPARK ARRESTER GUIDE (SAG)

The Multiposition Small Engine (MSE) SAG is a compilation of information, lists, and illustrations of qualified MSE spark arrester systems and engines including their identifying markings, design, and assembly.

The intent of the SAG is to provide field inspectors with adequate information to determine if a multiposition small engine and exhaust system combination have been tested and qualified by the San Dimas Technology and Development Center (SDTDC) as meeting the Standard for spark arresting exhaust systems. This SAG also includes information on chain saws manufactured prior to June 1978.

The SAG was previously printed as two volumes. In 2007, the SAG is printed in three volumes. This SAG (volume 2) covers **Multi-position Small Engine (MSE)** spark arresters, and the other two volumes cover **General Purpose and Locomotive (GP&L)** spark arresters (volume 1) and **Off-Highway Vehicles (OHV)** spark arresters (volume 3). A portion of volume 1 was removed and became the SAG for off-highway vehicles.

In each publication, there is a section for each type of arrester with illustrations of spark arresters listed in alphabetical order by the manufacturer's name, and lists of qualified and rated spark arresters of that type. Inspectors can use these sections to identify unknown arresters and to verify qualification status. Specific instructions for use of each section precedes the section.

Use of the SAG is also illustrated in the video *Spark Arresters and the Prevention of Wildland Fires* and may be used as a supplemental instruction tool. The video contains five separate modules titled, *Introduction, Multiposition Small Engine, General Purpose, Off Highway, and Railroad.*

SAG users can obtain copies of the three publications and the video by mail or FAX from the following address:

National Technology & Development Center
(SDTDC)
444 E. Bonita Ave.
San Dimas, CA 91773
FAX 909-592-2309

When you receive your publications, discard the old SAGs.

UPDATES TO THE SAG

Updates are available at the following Web sites:

<http://www.fs.fed.us/t-d/programs/fire/>
(Username: t-d, Password: t-d)
and

<http://fsweb/programs/fire/spark/sag-index.html>
(Internal to the Forest Service only)

For quick reference, updates should be inserted in the publication for the appropriate type arrester. These newly qualified arresters will be included with illustrations when the Guides are reprinted. (See following section.)

REPRINT INFORMATION

SDTDC will determine when adequate information has been compiled to require a revision of each publication. The Center will notify the Regional and State offices when a reprinting is available. It is anticipated that a reprinting of all three volumes will be required every other year.

SDTDC will include the following criteria in their reprint decision:

1. Determination of usable life of the SAG.
2. Volume and complexity of questions received from field users. Major users will be contacted periodically for feedback.
3. Number of SAG updates which have been issued.

BASIC DEFINITIONS AND TEST STANDARDS

Multiposition Small Engine (MSE)—defined by the Society of Automotive Engineers (SAE) Recommended Practice J335 as being a hand-held internal combustion engine operable in more than one position. MSE configurations include, for example, such devices as chain saws, weed trimmers, brushcutters, blowers, hedge trimmers, and cut-off saws.

Exhaust Particles—All internal combustion engines produce exhaust particles which are predominantly carbon with contaminants. These particles originate from deposits formed on the internal surfaces of the engine or exhaust system and, depending on their exact origin, may be expelled at temperatures in excess of 3,000 °F. Depending on the nature of the contaminants, these particles are capable of glowing or sometimes flaming combustion. When expelled through the exhaust system into the atmosphere, the combustion process may continue or even be accelerated during flight. Such particles, if larger than 0.023-inch in diameter and at temperatures of 1,200 °F are capable of igniting cellulose materials upon contact.

A Spark Arrestor—A device which traps or pulverizes exhaust carbon particles to a size below 0.023-inch in diameter, as they are expelled from an exhaust system. A spark arrester system includes the following components: Internal combustion engine, internal parts, external parts (bumper spikes, wrap-around handle bar, chain brakes, covers, muffler, and spark arrester.) Those components specified in the “Qualified List” are minimum requirements. Example: If a medium sized spike is required, then larger spikes are permitted. Optional components are limited to only those specified. Example: If only K&N and foam air filters are listed, all other air filters are excluded.

Testing of MSE’s is conducted in accordance with the Society of Automotive Engineers (SAE) procedure J335. This provides the methods of testing to evaluate the fire ignition potential of

exhaust systems used in MSE’S. These methods include tests for screens, and surface and exhaust gas temperatures. Screens and mounting systems are checked for openings not to exceed 0.023 inch. Surfaces and exhaust gases are checked while the MSE is operated under optimal load conditions. Temperatures shall not exceed 550 °F for exposed surfaces and 475 °F for exhaust gases.

Modification—any modification or damage to any part of the system as it was presented to SDTDC for testing **voids** the qualification of the spark arrester on the equipment. Modifications usually consist of removal of screen, change in exhaust outlets, smaller bumper spikes, removing chain brakes or hand guards, incorrect handle bar on chain saws, or other modifications to the engine or body parts. These changes may permit hot exhaust gases to come into closer contact with combustible fuels. Follow your agency policies when a modified spark arrester system is encountered.

MULTIPOSITION SMALL ENGINE SPARK ARRESTER INSPECTION PROCEDURES

The first step for identifying the spark arrester is to check for the model number and/or manufacturer’s identification or trademark. The words “Qualified” or “Approved” are not required, and **do not** indicate that the unit is in fact a qualified arrester.

1. Once Identification is established, refer to the “Qualified List.”
2. If the arrester cannot be positively identified, use the following procedure:

DETERMINE the make and model of the MSE the spark arrester is mounted on.

CHECK the “Qualified List” for specific information on approved spark arresters for that particular MSE make and model.

REVIEW the “Drawing Section” to match the arrester and verify the description.

3. If not on the “Qualified” list, be sure to check any SAG update information. The absence of an arrester from these lists indicates the arrester may not have been qualified.

4. After the arrester has been identified, check the component requirements indicated on the “Qualified” list. Then turn to the Drawing Section and check the Spark Arrester illustration for an exact match on the configuration. The drawing must match the arrester you are inspecting.

5. Tools needed for inspection:

- Miscellaneous small hand tools for the operator to remove or take apart spark arresters for inspection, including flat and cross-tipped screwdrivers, needlenosed pliers and several types of chain saw combination tools available from local dealers.
- Flashlight
- 0.024-inch wire gauge to qualify screen size.

6. Inspect the exhaust system for:

- Screen is in good condition with proper fit in its holder and no openings larger than 0.023 inch.
- Condition and presence of all required parts assembled in their proper order.
- Verify configuration for necessary covers or shields.
- Required additional equipment such as correct handle bar, bumper spike(s), or chain brake is in place.
- Any modifications. None are allowed to the exhaust system or engine.

7. More detailed instructions are available in the NWCG video, Spark Arresters and the Prevention of Wildland Fires.

INSPECTION PROCEDURE FOR CHAIN SAWS MANUFACTURED PRIOR TO 1978

Chain saws manufactured prior to June 30, 1978, are required to have all exhaust gasses pass through a screen with no opening larger than 0.023 inch. The screen must be heat and corrosion resistant, and shall provide at least 100 hours of service life.

Many manufacturers provide specific spark arrester screens for their pre-1978 brand and model of saws. On the other hand, many do not—but they meet the spark arrester requirement with a general purpose stainless steel screen (0.023 inch) which is allowed only on pre-1978 chainsaws not listed in the SAG.

It is acceptable for chain saw shops and chain saw owners to size and install approved arrester screens only on saws manufactured before June 1978.

How do you determine a pre-1978 chain saw? Ask the operator or call the dealer with the serial number.

PART ONE

CHAIN SAWS

The MSE Spark Arrester Guide, Volume 2, provides the information you need to determine if a MSE is qualified for use. This volume is divided into two parts—Chain saws and other MSE's. Each part has two sections—the green sheets and the drawings.

The green sheets indicate the qualified units with the minimum requirements for each.

The information on the green sheets is organized alphabetically by manufacturer, model number, and exhaust system.

PART TWO

OTHER MSE's

The MSE Spark Arrester Guide, Volume 2, provides the information you need to determine if a MSE is qualified for use. This volume is divided into two parts—Chain saws and other MSE's. Each part has two sections—the green sheets and the drawings.

The green sheets indicate the qualified units with the minimum requirements for each.

The information on the green sheets is organized alphabetically by manufacturer, model number, and exhaust system.

HELPFUL HINTS

1. Window screen or soft screen is not an approved spark arrester screen.
2. Have the owner/operator disassemble the spark arrester. Avoid dismantling someone else's spark arrester system.
3. How do you determine a pre-1978 chain saw?

Ask the Operator!

4. Sources of 0.024-inch wire/pin gauges:
 - ✓ Auto Supply Stores
 - ✓ Tool Supply Shops
 - ✓ Machine Tool Suppliers
 - ✓ Industrial Equipment and Supplies Outlets
